

# Better Security, Newer Technology

*Everything you need to know about your Lone Wolf Account.*

1

## **Your Data is Safer Than Ever**

Your new online user account contains state-of-the-art data encryption, password complexity, and account verification. We've also added an extra layer of security with technology industry's most sophisticated and secure infrastructure, including automated security patching, security groups, and many more cloud-based protections. This may mean you have a new username and password, but it also means you have the latest in cybersecurity protection.

2

## **Your Data is Still on Servers**

This new account may be online, but your data is still located on servers. The Lone Wolf Account does not send any of your data to the cloud. We only authenticate your login credentials online. This is simply a new username and password that you'll use to log into Lone Wolf solutions like brokerWOLF, Analytics, and WOLFconnect.

3

## **Your Update is Secure**

The Lone Wolf Account was delivered to you using the same secure, highly-sensitive method we developed to update your system. So, the process we put in place to deliver this update has been thoroughly developed and implemented many times in the past.

4

## **Your Technology Is Now Up to Date**

With the new Lone Wolf Account, we've updated our software to be in line with the latest in modern technology standards. This ensures you have a technology platform that works today, tomorrow, and years from now.
